The Alberta population at five year intervals, by single years of age is given for the years 1961 to 1986. The 1961 and 1966 figures are from the Canada censuses of those years. The populations for other specified years have been estimated as outlined below.

The population projection is based on the Dominion Bureau of Statistics publications:

1. Population by Single Years of Age, 1966
2. Regional Life Tables, 1960-1962.

To estimate annual births age specific female fertility rates have been used. The rates assumed are higher than the lowest rates of recent years, but considerably lower than in the immediate post-war period.

In the following detailed table no allowance has been made for either provincial net immigration or net emigration.

Net immigration to Alberta has averaged about 10,000 per year during the post-war period, but has fluctuated widely. The table opposite shows the annual estimated population of Alberta to 1986 assuming, first, no net immigration or emigration and, second, assuming an annual average net immigration of 5,000 persons.
